Department of Computer Science
Object Oriented Programming I
Lab Sheet 5
Composition

1. Create a class called Customer that includes three instance variables: id (int), name (String) and gender (char). The class contains:
 - A constructor that creates a Customer with the specified id, name and gender.
 - Provide get methods for each instance variable.
 - Provide a method toString takes no arguments and returns "name(id)".
 - Write a test program called TestCustomer to test the Customer class.
2. Create a class called Account that includes three instance variables: accNo (int), cus-tomer (of the class Customer you have just created, assume that each account has one and only one customer) and balance (double(initialized to 0.0)). The class contains:

- Two constructors:

```
+Account(id:int,customer:Customer,  
        balance:double)  
+Account(id:int,customer:Customer)
```

- Provide get methods for each instance variable.
- Provide set balance method.
- Provide a method toString takes no arguments and returns "name(id) balance = Rs xx.xx" (Balance rounded to 2 decimal places).
- Provide a method called deposit that deposit money to an Account (Add deposit amount to balance).
- Provide a method called withdraw that withdraws money from an Account.

```
    if (balance >= amount)  
        balance = balance - amount  
    else  
        print a message "Withdraw amount exceeded account balance."
```

- Write a test program called TestAccount to test the Account class.
